

almond oil

Almond Oil is extracted from the shelled Almond kernel (*Prunus amygdalus dulcis*). It contains vitamins, such as Vitamin E, minerals, protein and Essential Fatty Acids (EFA's). It is particularly high in the monounsaturated fatty acid called Oleic Acid (Omega 9).

Sweet Almond Oil is a rich source of Vitamin E making it an excellent addition to skincare products. This is one of the most useful, practical, and commonly used oils. It is great for all skin types as an acting emollient and is best known for its ability to soften, soothe, and re-condition the skin.

TYPICAL ALMOND FATTY ACID PROFILE

The 'Typical Fatty Acid Profile' shown above represents the major fatty acids only and excludes other minor components. Please note the data for this product will vary across different batches and seasonal harvests. For a full Technical Specification please contact us or alternatively visit www.seedoils.co.nz.

TECHNICAL DATA

Product Name: Almond Oil

Botanical Name: *Prunus amygdalus dulcis*

Active Ingredients: Oleic Acid (Omega 9), Linoleic Acid (Omega 6, LA)

Extraction Method: Expeller Pressed

Appearance: A pale clear yellow oil

Shelf life: If stored in unopened containers at less than 20 Deg Celcius, this product can expect to have a shelf life of 12 months.

Common Dosage: Liquid and/or Skincare Formulations

Product Variation:

- Sweet Almond oil Refined
