

# carrot seed oil

Carrot Seed Oil comes from an annual or biennial Carrot plant (*Daucus Carota*). The oil is derived from the dried Carrot Seeds, which are found in the plants flowers also known as umbels. The oil is golden yellow in colour, slightly sweet and with an earthy aroma.

Carrot Seed Oil is one of the most rejuvenating and regenerating oils that can be used in skincare. It contains powerful antioxidants, which gives positive effects on the skin as well as its ability to heal. It helps to improve the skins complexion by strengthening red blood cells and removing toxic build-up, thus toning the skin and increasing elasticity and firmness. It is also used as a kidney and liver cleanser as well as helping treat skin problems such as eczema, ulcers and boils. This oil is rich in beta-carotene as well as vitamins B, C, D and E and is extremely effective for dry and aging skin.

## TYPICAL CARROT SEED FATTY ACID PROFILE

The 'Typical Fatty Acid Profile' shown above represents the major fatty acids only and excludes other minor components. Please note the data for this product will vary across different batches and seasonal harvests.
