

jojoba oil

Jojoba Oil comes from the beans of the desert shrub like plant, *Simmondsia chinensis* and is a liquid wax containing more than 80% Long Chain Fatty Acids. It is bright and golden in colour and highly favoured in the carrier oil family because of its advanced molecular stability. It is liquid at room temperature and because of its unique fatty acid profile it does not oxidise or become rancid.

The properties of Jojoba Oil resembles that of sebum, an oily substance that is produced by human skin to prevent it from drying out. It is readily absorbed and does not evaporate like water based moisturizers, making it an excellent ingredient in skin and hair care formulations. Of all the compounds in nature, this wax ester is most similar to human skin oil (sebum), thus applying jojoba to the skin can “trick” the skin into thinking it is producing enough oil, subsequently balancing oil production.

TYPICAL JOJOBA OIL FATTY ACID PROFILE

The 'Typical Fatty Acid Profile' shown above represents the major fatty acids only and excludes other minor components. Please note the data for this product will vary across different batches and seasonal harvests. For a full Technical Specification please contact us or alternatively visit www.seedoils.co.nz.

TECHNICAL DATA

Product Name: Jojoba Oil

Botanical Name: *Simmondsia chinensis*

Active Ingredient(s): Eicosenoic Acid

Extraction Method: Cold Pressed

Appearance: A clear golden oil

Shelf life: If stored in unopened containers at less than 20 Degrees Celsius, this product can expect to have a shelf life of 12 months.

Common Dosage: Skincare Formulations

Product Variations:

- Jojoba Oil Cold Pressed refined
- Jojoba Oil Cold Pressed unrefined
- Jojoba Oil Cold Pressed unrefined ORGANIC

STAR RATING

Skincare ★★★★★
