

meadowfoam oil

Meadowfoam Oil is Cold Pressed from the seeds of *Limnanthes alba*. It is unique to other oils in that it contains more than 90% Long Chain Fatty Acids and these make Meadowfoam Oil particularly stable and resistant to oxidation and deterioration. As a result, it is a key ingredient for extending the shelf life of skincare products.

Meadowfoam Oil is a sought after ingredient due to its ability to retain moisture on the skin. It is widely used in skin and hair care applications because it is moisturizing, extremely stable, and capable of adhering to and staying on the skin. When applied to the skin, it forms a moisture barrier which proves invaluable in these products. Meadowfoam Oil is also currently being studied for pharmaceutical and industrial use.

TYPICAL MEADOWFOAM OIL FATTY ACID PROFILE

The 'Typical Fatty Acid Profile' shown above represents the major fatty acids only and excludes other minor components. Please note the data for this product will vary across different batches and seasonal harvests. For a full Technical Specification please contact us or alternatively visit www.seedoils.co.nz.

TECHNICAL DATA

Product Name: Meadowfoam Oil

Botanical Name: *Limnanthes alba*

Active Ingredient(s): Long Chain Fatty Acids (>C20)

Extraction Method: Cold Pressed

Appearance: A clear yellow oil

Shelf life: If stored in unopened containers at less than 20 Degrees Celsius, this product can expect to have a shelf life of 12 months.

Common Dosage: Skincare Formulations

Product Variations:

- Meadowfoam Oil Cold Pressed refined
- Meadowfoam Oil Cold Pressed unrefined

STAR RATING

Skincare ★★★★★
