

# sunflower oil high linoleic

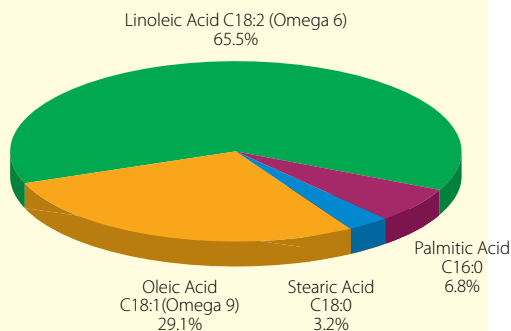

Sunflower Oil High Linoleic is Cold Pressed from the seeds of the Sunflower (*helianthus annuus*). It is a clear odourless oil that is commonly used as a ingredient in skincare products as well as a cooking oil. This is a polyunsaturated oil which means it has high amounts of Linoleic Acid (Omega 6, LA), as well as Vitamins A, D, E, and is low in saturated fat.

Sunflower Oil High Linoleic is sensitive to heat so should not be cooked with at high temperatures. This oil is more suited as a salad dressing oil or drizzled over vegetables.

Sunflower Oil High Linoleic is deeply nourishing and conditioning for the skin and it is highly recommended for formulations designed to treat dry, weathered, aged, and damaged skin because it helps retain moisture and prevents the skin from drying out. It is easily absorbed and applied.

## TYPICAL SUNFLOWER OIL HIGH LINOLEIC FATTY ACID PROFILE

The 'Typical Fatty Acid Profile' shown above represents the major fatty acids only and excludes other minor components. Please note the data for this product will vary across different batches and seasonal harvests.
